AMENDMENTS TO THE CLAIMS

Please amend claims as follows:

Claims 1-8. (Canceled).

- (Currently amended) A method for preparing an organ by perfusion prior to transplantation or storage of the organ comprising:
- (I) providing an ischemic reperfusion injury prevention preparation for perfusion of an organ prior to transplantation or storage of the organ, wherein the ischemic reperfusion injury prevention preparation comprises:
- (A) a soluble derivative of a soluble polypeptide, wherein the soluble derivative comprises:
 - a fragment of complement receptor 1 (CR1), wherein the fragment has a sequence that is set forth in SEQ ID NO: 1 and has an immunoregulatory complement inhibitory activity, and
 - (2) at least two membrane binding elements, wherein (a) at least one membrane binding element is a non-peptidic membrane binding element comprising acyl groups, and (b) at least one membrane binding element is a peptidic membrane binding element comprising basic amino acids, wherein the peptidic membrane binding element is bound to the nonpeptidic membrane binding element and the fragment of complement receptor 1: and
- (B) a physiologically acceptable and non-reducing flush storage solution; and
- (II) perfusing the organ with the ischemic reperfusion injury prevention preparation, wherein the organ contains the ischemic reperfusion injury prevention preparation while isolated and prior to implantation.

Claims 10-13. (Canceled).

- 14. (Previously presented) The method according to claim 9, wherein the physiologically acceptable and non-reducing flush storage solution comprises potassium citrate, sodium citrate, mannitol and magnesium sulphate.
 - 15. (Canceled).
- 16. (Previously presented) The method according to claim 9, wherein the fragment of complement receptor 1 (CR1) has a sequence according to positions 2 to 197 of SEQ ID NO 1
- 17. (Previously presented) The method according to claim 9, wherein the peptidic membrane binding element comprises a sequence selected from the group consisting of SEQ ID NO: 7, SEQ ID NO: 8, SEQ ID NO: 9, SEQ ID NO: 10 and SEQ ID NO: 11.
- 18. (Previously presented) The method according to claim 9, wherein the non-peptidic membrane binding element comprises myristoyl.
- (Previously presented) The method according to claim 9, wherein the organ is a kidney, a heart, a liver, or a lung.
- (Previously presented) The method according to claim 19, wherein the organ is a human organ.
- 21. (Previously presented) The method according to claim 19, wherein the organ is a non-human animal organ.
- 22. (Previously presented) The method according to claim 9, wherein the peptidic membrane binding element comprises 8 to 20 amino acids.
 - (Canceled).
- (Currently amended) The method according to claim 14, wherein the physiologically acceptable flush storage solution is <u>a kidney perfusion solution</u> (SOLTRAN).
